

Assessment

Assessment is an ongoing daily process to measure student progress toward attainment of district benchmarks and learning goals.

The district curriculum is designed to reflect the state standards and to include a variety of tools for measuring student proficiency toward meeting the established benchmarks.

Assessment results are used to identify students who are experiencing difficulty achieving proficiency on specific standards and additional learning opportunities are provided. Dallastown Area School District utilizes the state, national, and local assessments to measure student achievement in a wide range of subjects and courses of study.

District teachers and administrators are reviewing, considering, and adopting texts, methods, computer programs, and other strategies to continuously improve instructional programs.
